

# Stainless Steel Brake Line Kits

Extended stainless steel brake line kits are designed to replace stock rubber brake hoses on vehicles that have been lifted 4" or more. Steel braided lines will not swell under increased braking pressure demanded by larger tires, thus delivering a quick and positive braking response. All stainless steel hoses we sell comply with Department of Transportation (AKA: D.O.T.) specifications.

Although extended length brake hoses are necessary on many suspension lift kit installations, labor to install the brake hoses themselves should be performed by a certified brake mechanic. Care must be taken to assure no interference of moving parts is encountered. Proper length and routing must also be used to eliminate any possibility of bind throughout the steering and suspension cycles.

## Chevy S.S. Brake Lines

Front brake hoses on solid axle heavy duty chevy trucks have round fittings where the hose connects to the caliper. Front brake hoses on light duty solid axle Chevy trucks have square fittings where the hose connects to the caliper.

Heavy Duty

Light Duty

On 1978 and earlier Chevys, the thread size of the banjo bolt is 7/16". 1979 and later, it's 3/8".
