

Shims, Degree

You finally got your truck lifted and it looks great, but now you've got drive line vibration. If you bought your kit from Jack-it, you probably won't have this problem, but if you do, chances are some minor shimming will correct it. Degree shims come in several different degree angles so you can get the proper correction for your particular need. If you are not sure how much correction you'll need, give us a call and we'll try to help you. Shims are available in Aluminum, Cast Iron, or Steel. Although the steel shims are a little more costly, they're less likely to come loose or even fall out. These shims actually become part of the spring pack and come with centerpins. *(All pricing is for a pair of degree shims unless noted otherwise in description. Center pins will also need to be purchased, call for details.)*

(Center Pins Not Included)

(3/8" Center Pins Included)

(Center Pins Not Included)

(5/6" Center Pins Included)

Degree	Description	Width	Part #	Pricing

RCD Skid Plates

The Front Skid Plate System provides the finishing touch to any lifted truck. The skid plates provide great looks and additional protection to the front of the vehicle.

Skid Plates are sold individually, in either Brushed Aluminum or Polished 304 Stainless Steel, as a universal application that can be adapted to virtually any vehicle. Direct bolt-on bracket kits (mounting hardware) are designed for use in conjunction with an RCD Suspension System and one of the universal skid plates.

Chevy Mounting Hardware (Only)

Year	Model	Description	Part #	Pricing
