

## Anti-Sway Bars

Increasing anti-sway bar diameter, or adding a rear sway bar, can greatly improve handling and stability, whether in a sports car, a motor home or a heavily loaded truck. In a lowered or raised vehicle, anti-sway bars can also compensate for dynamic handling changes. Hellwig Anti-Sway Bars use 4140 chrome-moly spring-grade steel, and bars are entirely heat-formed and coined as one piece, for strength and resistance to torsion. You will need to reuse the factory sway bar end links or if your truck does not have a factory rear sway bar, order the proper rear sway bar end links on the next page.

Anti-Sway Bars:

- come with a lifetime warranty
- are made of high-quality alloy spring steel
- are hot-formed and heat treated for strength

### Body Roll Resistance

Body roll is reduced by the torsional effect of Hellwig Anti-Sway Bars, which transfer pressure from outboard wheels to inboard wheels in a turn. That means weight is more evenly distributed to all four wheels, helping to keep your vehicle more level with the road, and improving your overall control.

Year	Description	Front/ Rear	Part #	Pricing
99-04	Superduty 1.5"	Front	HWG 8240	
99-06	Superduty 1.25"	Rear	HWG 8236	
05-06	Superduty 1 1/16"	Front	HWG 8241	
97-06	Wrangler TJ (Adjustable HD) 3/4"	Rear	SKJ RSBA410	

Hellwig's 1-1/8" dia Sway Bar has greater surface area which means greater roll resistance.

Typical factory 1" dia Sway Bar

### Roll Resistance Increase Table

1-1/4" diameter Sway Bar						20%
1-1/8" diameter Sway Bar				50%		85%
1" diameter Sway Bar			60%	144%		195%
7/8" diameter Sway Bar		70%	175%	315%		400%
3/4" diameter Sway Bar		85%	216%	400%	675%	840%
5/8" diameter Sway Bar	106%	283%	553%	950%	1500%	1840%
Hellwig Sway Bar Diameter	3/4"	7/8"	1"	1-1/8"	1-1/4"	1-5/16"

### Tech Tip

The 05-07 4WD Ford F250 and F350 Super Duty has a very small 23/16" front sway bar. This model does not handle very well and has a lot of nose dive into corners with this small of a front sway bar. When the truck is lifted, it exaggerates this even more! The 1-1/16" replacement front sway bar is a major improvement over the stock unit, giving approx. 530% increase in roll resistance. The handling and nose dive improvement with the new bar is drastic, and even more amazing if installed on a lifted truck or under towing and heavy load conditions.

### "Super-Flex" Sway Bar End-Links

These RCD billet steel sway bar end-links are another first in the lifted truck market utilizing a unique ball and socket head that allows up to 23° of misalignment ensuring bind free operation. Utilizing the latest in CNC operations, these end links are constructed of turned down steel billet and feature oversized urethane bushings and zinc plated billet shaft. The links are sold in pairs, by center-to-center length, and come complete with all necessary bushings and hardware.

Description	Each/Pair	Length	Part #	Pricing
"Super-Flex"	Pair	9.5"	RCD 20-69917	
"Super-Flex"	Pair	6.5"	RCD 20-70125	

### Sway Bar Extended End-Links w/ Polyurethane Bushings

Similar to a sway bar drop kit, extended sway bar end links correct the angle of the sway bar once your vehicle has been lifted. The difference is that a drop kit lowers the mounting point on the frame to correct the angle, whereas the extended sway bar links, you simply remove the stock sway bar end links and replace them with the proper extended sway bar end link. The following applications are available.

## Skyjacker Sway Bar Drop Kits

Sway bar lowering kits attach to the frame of your vehicle to lower the mounting point where the sway bar attaches to the frame. If you lift your truck 4", you will most likely want to use a sway bar lowering kit. If you go 6" or higher, you will have to use

a sway bar drop kit or your sway bar won't be able to connect to the frame. If you purchased a complete Jack-it suspension package, a sway bar lowering kit will be included if it is necessary.

## Sway Bar Quick Disconnects

Improve the flexibility and travel of your suspension. Sway bars help to maintain a smooth and controlled highway ride, but they limit wheel travel and suspension flexibility—which is very important for offroad performance. With sway bar "Quick Disconnects" you can quickly and easily improve your wheel travel which helps you keep all four wheels on the ground, resulting in better traction and improved off-road performance.

## Jeep Warrior Quick Disconnects

The Warrior sway bar disconnects are made with a double snapper clip for removing the entire bar. They have four lengths to choose from with either an eye on both the top and the bottom, or a post on the top and an eye on the bottom. They come complete with black polyurethane bushings in two assembled bars. We have included the length from eye to eye because these disconnects will work on any vehicle with matching lengths. We have also included the typical Jeep applications that these are specifically designed for. The new design for the TJ Wranglers is particularly innovative. Typical straight tube disconnects are extremely difficult to re-connect on TJ's due to the design of the vehicle. Warrior has solved this problem by way of a bent tube.

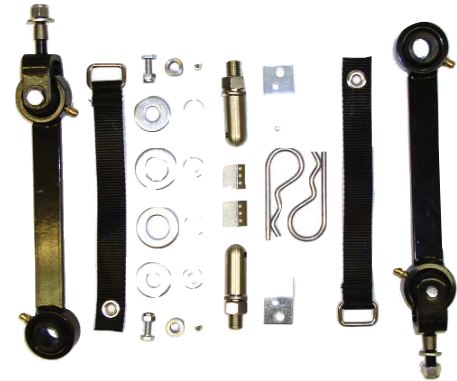

Year	Description	Lift	Length	Part #	Pricing
