

T-Case Drop kits

What do Transfer Case Drop Kits do? They drop your transfer case.

When you lift your truck there are several things that must be considered. One of

the main areas affected by a lift is the angle of your drive line. That

angle at which the drive line goes into the T-case must be correct or you can get a "growl" or drive line vibration.

These transfer case drop kits are designed to lower the transfer case to correct the driveline angle of a lifted truck. If you purchased your suspension package through Jack-it and a transfer case drop is necessary, it will be included (except the Jeep XJ kits).

T-Case Indexing Ring and Seal Adapter

This will decrease your front driveshaft angle. A too steep angle can cause vibration or bind up your driveshaft.

Year	Description	Seal	Part #	Pricing
94-01	1/2, 3/4, and 1 ton 4WD (Ring Only, order the seal adapter separately)	None	SKJ IXR20	
02-05	1/2 ton 4WD (Ring and Seal Adapter)	2.69"	SKJ IXR20K
