DEMAND RIZE!**

04-07 F150 4WD 8" Rize Lift Kit

The front kit consists of bracketry that is modeled in 3D CAD using an artistic design touch, but with form and function foremost in mind. Starting with 1/4" A36 steel the bracketry is CNC cut and formed into a boxed and gusseted configuration, then welded at strategic points to maximize strength. By using these manufacturing methods and combining them with our quad link support struts and integrated skid plate, we at Rize Industries are able to supply drop down bracketry that is both stronger and more visually appealing than that of the competition.

Combining all this with special bracketry to use the stock coil-overs, or an upgrade to optional aftermarket coil-overs, what you end up is simply the finest F150 Lift Kit on the market, PERIOD, END OF STORY!

This Kit Features:

- True wheel clearance for 35", 37" and 40" tire size.
- Proper steering and alignment geometry
- A bold aggressive yet integrated look
- No cutting front valances
- Shocks are included
- Easy Installation
- Factory like ride
