

This complete Skyjacker kit will lift your 4-door JK 4" and your 2-door 5". Softride coil springs provide excellent on road handling and ride characteristics. Along with front and rear track bar brackets, it also includes front and rear control arms with greasable bushings. Lower front control arms are formed from 1/4" wall DOM tubing. Front and rear bump stop spacers and all necessary grade 8 hardware are included. Shocks are required but sold separately. A drop pitman arm is recommended. This kit allows clearance for 35" tires, without any fender cutting or trimming, and provides better off-road performance.
